Malate synthase (EC 4.1.3.2) isoenzyme G - Escherichia coli (strain K-12)
C;Species: Escherichia coli
C;Date: 23-Aug-1995 #sequence_revision 13-Mar-1997 #text_change 01-Mar-2002
C;Accession: S51789; F65083
C;Accession: L; Pellicer, M.T.; Badia, J.; Aguilar, J.; Baldoma, L.
Bur. J. Biochem. 224, 541-548, 1994
A;Title: Molecular characterization of Escherichia coli malate synthase G. Differentiati
 A,Molecule type: DNA
A,Residues: 1-727 <STO>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- PATHWAY: Glyoxylate bypass; second step.
-!- SUBUNIT: Monomer (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the malate synthase family. GlcB subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TDRVSVGNLRIARVLYDFVNNEALPGTDIDPDSFWAGVDKVVADLTPQNQALLNARDELQ

Submitted (MAY-2002) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: Acetyl-CoA + H(2)O + glyoxylate = 5-malate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -!- ENZYME REGULATION: Inhibited by oxalate, glycolate and ATP.
-!- PATHWAY: Glyoxylate bypass; second step.
-!- SUBUNIT: Monomer.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to the malate synthase family. GlcB subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 TDRVSVGNLRIARVLYDFVNNEALPGTDIDPDSFWAGVDKVVADLTPQNQALLNARDELQ
